Abstract not available for CH656588

Abstract of corresponding document: **EP0097622**

1. A single-track cabin vehicle comprising a self-supporting body comprising a front part (15) which is open at the bottom and which surrounds a front wheel (11) and has a steering head (13) to guide the front wheel (11), and a fuselage part (1) which at least partially surrounds a useful space, with means (20) for guiding a rear wheel (12), the front part (15) comprising a self-supporting first shell adapted to accommodate the front wheel (11), while the fuselage part (1) comprises a second shell which is open at the top at least in the area of the useful space (5) and which is constructed after the style of a ship's hull, said second shell comprising a cutout (16) which is open at the bottom and at least partially encloses the bottom edge part of the first shell and is rigidly connected to the first shell along a common line of intersection (17), the guide means (20) for the rear wheel (12) being secured to the rear zone of the second shell, characterised in that the first shell surrounds the front wheel (11) substantially after the style of a bell and the steering head (13) is secured solely to the topmost part of this first shell.
